

Task: Support Ticket System

Duration: 4–5 Days

Core Features (Required):

1. Authentication & Role Management

- Use Laravel Breeze or others
 - Roles: `Customer`, `Support Agent`, `Admin`
 - Use `spatie/laravel-permission` or Laravel Gates/Policies
 - Admin can assign roles to users
-

2. Ticket Management

- Customers can create support tickets:
 - Fields: Subject, Category, Priority, Description, File Attachments
 - Statuses: `open`, `in progress`, `resolved`, `closed`
 - Tickets table: includes `user_id`, `assigned_to`, `status`, `priority`, etc.
-

3. Ticket Reply System

- Table: `ticket_replies`
- Replies stored as thread under each ticket
- Both customers and agents can reply

- Attachments optional
 - Display in a clean chat-like view (UI framework optional)
-

4. Email Notifications (Laravel Mail)

- Send email on:
 - Ticket creation (to customer & agents)
 - New replies (to the other party)
 - Use Laravel Mailable classes
 - All emails must be **queued using Laravel Queues**
-

5. Queued Jobs (Laravel Queues)

- Configure Redis or database queue
 - Queue:
 - Email notifications
 - Future scheduled tasks (optional)
-

6. Admin Dashboard

- View and filter all tickets
 - Assign tickets to agents
 - View and manage users & roles
-

Bonus (Optional, if time permits):

Real-time Ticket Replies (Laravel Reverb + Echo + Redis/Pusher)

- Enable real-time reply updates using Reverb
 - Notify customers and agents when a new message is added
 - Broadcast updates using `broadcastOn()` and private channels
-

Deliverables:

- Well-commented codebase (Git repo)
- README with setup instructions (env, queues, mail)
- Optional: Seeder for roles/users/tickets
- Flexibility to use **Blade or React**
